

Title	The Role of Forest for Strengthening Resilience to Climate Change
Organizer	Japan International Cooperation Agency (JICA) and Forestry Agency of Japan
Type of event	Presentation and Panel Discussion
Venue	Room 311
Date/Time	Wednesday, June 19; 13:30-15:00
Event description	
<p>In recent years, it is becoming more important to share information on forest utilization for climate change adaptation, while the impact of climate change, such as increase in frequency of heavy rain and maximum-strength typhoon, has been concerned. Hence, this event aims to foster momentum of utilizing forest and forestry techniques to develop measures based on various situations in each country. Introduction of activities on climate change adaptation utilizing “Forest Power”, in particular techniques and knowledge about prevention and reduction of disasters in mountain and hillside areas, is the key of the event.</p>
